

# Report on Landing Page:

- First of all, i took a bootstrap template from google (link-<https://colorlib.com/wp/template/startup-2/>) . I also saved that template on my github (id: Rishu-kmr).
- I took the images for my website from CoughLoud's fb page (<https://www.facebook.com/coughloud.healthwin.in>) and modified my bootstrap template. (for modification-some basic idea of html and css)
- For the content part, I took it from the site <https://coughloud.healthwin.in/survey> and also some from its fb page.
- I also noted down some points of our teams, for that, i took help from my mentor.
- I then modified the template by adding some extra icons like mic on the corona virus. I got that icon from the site <https://fontawesome.com/icons?d=gallery> and i also used some of the icons for marketing, technical and research and development teams.
- Lastly came the sign up part, for that, i used the firebase database to store the information.
- I added all the dependencies , checked it from the docs of firebase console, but there was some issues and i couldn't get this part done.
